Weight Management Resources Guide

Community Resource Guide

The following resource guide will assist you in locating facilities near you that offer weight loss programs as well as other resources to increase your physical activity and help you lose weight.

Contents

- Tips for increasing physical activity
- Information on local contacts, internet and telephone resources
- Tips on making healthy food choices
- Township maps which feature:
 - IUMG clinic locations
 - sites with formal weight loss programs
 - other community resources for physical activity
 - community parks and trails
 - addresses and contact information for each resource

Acknowledgements

Why use a community resource to increase your physical activity and lose weight?

Becoming more physically active is recommended by many experts

The Centers for Disease Control and Prevention
The U.S. Surgeon General
The U.S. Preventative Service Task Force
American Heart Association
American Diabetes Association
Numerous other expert organizations

Physical activity lowers your risk for major health problems, including...

Diabetes	Osteoporosis
Heart disease	Stroke
Falls and injuries	Depression
Obesity	Colon cancer
High blood pressure	Premature death

PREVENTING TYPE 2 DIABETES

If you have Pre-Diabetes, losing just 5 to 7% of your body weight (about 10 to 15 pounds for a 200-pound person) can cut your risk for getting diabetes by 60%

Getting Started

Becoming more active is very safe for most people

Even small increases in physical activity will improve your health if you are not currently active. It is important to **start slowly** and check with a doctor before you get started.

If you are inactive or have a chronic medical problem, try starting with 5 minutes a day doing something you like to do, then gradually increase your activity level.

If you think that there might be any reason that you should not exercise, and you have not discussed this issue with your doctor, you should first talk with your doctor before you start any new activities.

Choose a variety of activities from 3 major areas

Endurance Activities

“Continuous” activities like walking, jogging, bicycling, swimming, dancing, and aerobics

Flexibility Activities

Gentle reaching, bending, and stretching

Strength and Balance Activities

Resistance exercises and lifting weights

Getting started is easier than you think

- Build physical activity into your **daily routine**
- Pick activities that you like the most
- Do the activities you are doing now, more often
- Set a goal you can reach and stick to it
- **Start slowly** with easy stretching
- Walk wherever and whenever you can
- Take the stairs instead of the elevator
- Try new activities with a **partner or a group**

Local Contacts

Contact these community resources for additional help

- Talk to local **recreation departments** to see what programs they offer adults
- Ask your local **health department** about resources near your home or work
- Ask about safe **walking paths** and mall-walking programs in your community
- If you are 65 or older, check out the **senior centers** in your neighborhood
- Ask the local **fitness clubs** if they have programs at a reduced cost

Internet Resources

Check out these internet resources for additional information

- **FitCity** - <http://www.fitcityindy.org>
FitCity is a collaboration between The Health Foundation of Greater Indianapolis, United Way of Central Indiana, Information and Referral Network, and more than 100 programs across Central Indiana. The mission of FitCity is to educate residents in this region about obesity and prompt them to move more and eat less.
- **INShape Indiana** - <http://www.in.gov/inshape>
Search INShape Indiana for a comprehensive list of high quality physical activity and nutritional resources throughout the state of Indiana.
- **Healthier US** - <http://www.healthierus.gov/>
This resource provides useful information regarding physical activity and nutrition. It is provided by the U.S. Department of Health and Human Services.
- **NDEP** - <http://ndep.nih.gov/>
The National Diabetes Education Program is a federally funded program sponsored by the NIH, CDC and over 200 partners at the federal, state and local levels working together to educate the public about diabetes. Check out the NDEP's free publications available by mail or downloadable to your computer.

2-1-1 Resource

- Sponsored by the United Way, **2-1-1** is a 24-hour available number that connects callers to information about health and human services available in your community.
- Contact **2-1-1** for more information about physical activity resources and nutritional information to help you succeed in losing weight and preventing diabetes.

Reading Food Labels

Reading food labels is an important step in losing weight and maintaining a healthy, balanced diet. Be sure you pay close attention to the serving size. For example, if you eat double the serving size you would need to double the amounts listed in the nutrition facts. The following is a general guideline to reading food labels. Visit www.cfsan.fda.gov for more detailed information about food labels.

Trails

Fall Creek Trail

Description:

Trail runs 6.9 miles from Skiles Test Nature Center to the Monon-Rail Trail. Trail features winding roads, wide forested corridors and parallels the waterway.

Finding a Weight Loss Program That Works For You

Before you begin a weight loss program, see your primary health provider for advice about your overall health risks and the weight loss options best for you. Health experts agree that the best and safest way for most adults to lose weight and improve their health is to modestly cut calories, eat a balanced diet and be physically active each day. The following are some questions to ask when evaluating a weight loss program.

Questions to Ask

What's involved in following the program?

Ask for details about what foods and how many calories you'll eat each day, and whether the program includes regular physical activity. A weight loss program that claims you can lose weight and keep it off without changing the foods you eat or increasing your physical activity is selling a fantasy.

A sensible program encourages you to follow advice from the Dietary Guidelines for Americans, such as eating at least five daily servings of fruits and vegetables, and choosing grains, lean meats and low-fat or fat-free dairy products.

People usually do best when they reduce their usual calorie intake or increase the calories they use by about 500-1000 calories per day.

What are the staff qualifications?

If a program includes assistance from staff members, ask about their training, experience and credentials. Find out what type of attention you'll receive (for example, individual counseling or group support) and how often.

What are all the costs of this program?

Ask for an itemized price list that includes:

- membership fees
- fee for weekly visits
- diagnostic tests
- food meal replacements
- dietary supplements
- other products in the program

How successful are other people who follow this program?

Ask whether the program can provide studies that document its success. If so, ask what percentage of all customers have completed the program, how much weight they lost, and how successfully they've kept the weight off over a one-year period or longer.

What are the risks of using the product or services?

Some methods for losing weight are riskier than others.

- Diets that require drastic food restriction should be under the supervision of a physician.
- Check with your primary health care provider before you take prescription or over-the-counter weight loss drugs or other products that are part of the weight loss program.
- Steer clear of harmful "self help" weight loss tactics, such as smoking, fasting, purging, or abusing laxatives.
